

Lions District 306C1
(Sri Lanka)

HOW TO MAKE THIS HAPPEN?

Challenges for the Project?

- Inflation Rate of Sri Lanka has risen upto 70%
- This has affected all construction and equipment costs to rise high.

You can help in 2 ways !

Purchase one Mee plant at 1\$

Join us as an overseas Lions project

Help us in making this project a success in this difficult time in Sri Lanka

Lions District 306C1 (Sri Lanka)

1\$ CAMPAIGN

Donate 1\$, to plant **100,00 plants** and save **40,800 lives annually**

100,000 Mee plants

- As the First Vice District Governor, we started 6 "Mee" plant nurseries all around the country

Why Mee Plant (Madhuca longifolia) ?

"Instead of just donating a meal for one day; why not nurture the agriculture to provide meals forever..."

- In this current economic crisis we are expecting a food shortage due to the lack of fertilizers. Mee plant is known to be the best natural fertilizer which will help with paddy fields.
- **Release oxygen** during the **day and at night**. (Normal tree would release O2 in the day and CO2 in the night)
- Seeds are **natural pest repellent** and it releases **fertilizers rich in Urea and Nitrogen** that are used in Agriculture.
- Planted in water will result in **nutrition-rich liquid fertiliser** to be carried away to downstream paddy fields.

Plan in 2023-2024

This year, We are planning to plant all 100,000 Mee plants across the country

Mee Plant cultivation in progress

How to save 40,800 lives?

- We started to build a Non-communicable disease screening centre for the under privilege people
- This Hospital will serve **40,800 lives annually.**

Why a Screening Center?

- After a proper evaluation, World Health Organization has declared that **75% of deaths** in Sri Lanka are **due to non-communicable diseases** and has advised to build screening centers across country
- Therefore, we decided to build one !
- *This will be the **First Lion Non-communicable disease Screening Center in Sri Lanka***

Screening Center plan
